

2. Muscle movements and function

Examining the rotator cuff muscle group. Explain the how the muscle group contribute to the movement by answer the following questions:

1. Which joint(s) does the muscle group control? (Be specific)
[1 mark]
2. List three passive structures that support the joint. For each structure, state a movement it resists.
[3 marks]
3. List a muscle in this group that facilitates joint congruency during end abduction. Explain how this muscle this achieves this through a biomechanics lens.
[3 marks]

Now try practice explaining your answers with the virtual tutor.
